[1] JUMPER FOR COM PORT CONFIGURATION

Pin 9 of the COM port is a multi-functional signal. Based on the Jumper JP1 configuration on the mainboard, it can be configured as a Ring Indicator (RI) or external power supply with a voltage of either 5V or 12V. Each COM port can be configured separately (the operating mode of COM1 can be set to RS232, RS422, or RS485 in the BIOS). The second COM port (COM2) supports RS232 mode only and is only available as an onboard connector on the mainboard. An appropriate adapter (ie the optional accessory PCP11) is required in order to use this port as a D-sub connector on the back panel (the VGA port cannot be used in this case).

[2] LTE ADAPTER KIT WWN03

If the LTE adapter kit WWN03 is used, the 2.5" bay cannot be used for SATA drives (2.5" HDD/SSD). An SSD card using the M.2 2280 format must be used instead.

[3] TEAMING MODE

The teaming function allows for grouping both available network adapters to work as a single adapter. The benefit is that it enables load balancing and failover.

[4] FOUR-PIN HEADER ON BACK PANEL

This header allows for connecting an external power button and also provides 5V DC voltage for external devices and the Clear CMOS function (optional accessory cable CXP01 is needed for external power button).

[5] HIGH AMBIENT TEMPERATURE

For high ambient temperatures over 35°C, SSDs are strongly recommended instead of hard disk drives

[6] POWER ON AFTER POWER FAIL

The BIOS setup provides a "Power-On after Power Fail" function that can be found under "Power Management Configuration". As the name indicates, this function determines the PC's behavior after a power failure: (1) unconditional power on, (2) restore former status, or (3) keep system turned off. This function may fail after short power failures, but the DS20U comes with a hardware based solution in these cases. By removing the Jumper J9 on the mainboard (behind the power button), the system will start unconditionally once power is supplied.

[7] HOW TO CONVERT DISPLAYPORT TO HDMI/DVI

The DisplayPort output can be converted into a HDMI or DVI output using an additional passive adapter cable. The integrated graphics automatically detects the connected display and outputs the appropriate electric signal - either DisplayPort (without an adapter) or HDMI/DVI (with an adapter). However, a monitor with a DisplayPort connector cannot be connected to the HDMI port with a simple passive adapter.
