CUBE PC

## [1] FOR BLU-RAY PLAYBACK

Appropriate software and a Blu-Ray drive is required (not included with this model)

## [2] HOW TO CONVERT DISPLAYPORT TO HDMI/DVI

The DisplayPort output can be converted into a HDMI or DVI output using an additional passive adapter cable. The integrated graphics automatically detects the connected display and outputs the appropriate electric signal - either DisplayPort (without an adapter) or HDMI/DVI (with an adapter). However, a monitor with a DisplayPort connector cannot be connected to the HDMI port with a simple passive adapter.

## [3] INTEGRATED GRAPHICS IS OPTIONAL FOR SOME PROCESSORS

Processors with model numbers ending with "F" (like Intel Core i5-11600F) do not support integrated graphics. In cases of these processors, a discrete PCI-E graphics card is mandatory. Intel<sup>®</sup> 11th Gen Rocket Lake CPUs are integrated with Intel<sup>®</sup> UHD Graphics 750 and Intel<sup>®</sup> 10th Gen Comet Lake CPUs are integrated with Intel<sup>®</sup> UHD Graphics 630/610.

## [4] TEAMING MODE

The teaming function allows you to group both available network adapters together to function as a single adapter. The benefit of this approach is that it enables load balancing and failover.

## [5] ONLINE POWER CALCULATOR

The PCI Express x16 slot provides a maximum of 75 watts to the graphics card, plus 75 watts from the 6-pin connector of the power supply - the power consumption of the graphics card must not exceed 150 watts. The processor may have a maximum TDP of 125 watts. If powerful PC components are used, then check the power supply calculator to see whether the 300 watt power supply supports this configuration (see: <http://global.shuttle.com/support/power>). Please also refer to the support list for detailed processor and graphics cards support information at <http://global.shuttle.com>.
